**JBL PROFESSIONAL INTRODUCES 3631 SCREENARRAY® CINEMA
LOUDSPEAKER**

ORLANDO, FLORIDA, October 16, 2007 — Providing cinema exhibition and post production with unprecedented performance and versatility in a more compact format, JBL Professional is showcasing the new 3631 ScreenArray® loudspeaker as the latest addition to its award-winning ScreenArray line of cinema loudspeakers. The 3631 ScreenArray features added power capabilities while maintaining a lower visual profile.

The 3631 model includes the popular 3632 mid/high frequency horn, featuring patented Screen Spreading Compensation™ and Focused Coverage Technology™, coupled with a 600-watt low-frequency section loaded with a 15-inch Vented Gap Cooled (VGC™) low-frequency transducer. Because of this, the 3631 ScreenArray has a lower profile than the current 3632 model, yet provides an increase in low frequency power. The 3631 ScreenArray is available as both the THX-approved tri-amplified system (3631-T) or as a bi-amplified model (3631).

“Many cinema and post production applications require powerful, controllable audio in a lower profile system,” said Chuck Goodsell, Director of Cinema Marketing, JBL Professional. “The addition of the new JBL 3631 ScreenArray loudspeaker provides all of the advantages of advanced ScreenArray technology in a more compact system.”
